

## Laser Marksman Training System

LOCATION	N/A
DESCRIPTION	The LMTS, also known as BEAMHIT and BRPM, is a unique commercial-off-the-shelf laser marksmanship training system that supports the Army's training strategy. Since it is light, transportable, uses self-sustained power or power from a vehicle and requires no fixed facilities support, it is ideal for training scenarios in the field during the day or at night. LMTS accommodates numerous weapons and calibers to include the following: M9 pistol, M16 and M4 rifles, and M249, M240 and M2 machine guns. It uses the individual Soldier's personal weapon, optics and accessories. LMTS allows units to conduct individual and sustainment marksmanship training using nuclear, biological and chemical equipment.
LATRINE FACILITIES	N/A
CLASSROOM FACILITIES	N/A
COMMUNICATIONS TO RANGE CONTROL	N/A
RESTRICTIONS	The LMTS is only available to DOD component units and may not be transported outside the boundaries of CBTC without permission from the Base Operations Supervisor.
REMARKS	Scheduling. The CBTC Mobile Marksmanship Team (MMT) can train large numbers of troops at your location. Contact Camp Butner Range Control at a minimum of 90 days prior to the tentative training date in order to request the MMT. If the MMT is not required, your unit may submit a request to Range Control to obtain the LMTS for training purposes.
